

Real-Time Settings

SQL DM for MySQL provides you the option to choose the data collection mode for Real-time monitoring.

You can choose between **Processlist** and **Performance schema**. Select **Performance schema** mode if your MySQL version is 5.6.14 or above and if performance schema is enabled, otherwise you can go with **Processlist** mode.

REAL-TIME MODE

Performance Schema ▾

Performance Schema works with 5.6.14 and above. It will show all the queries and many extra information like number of rows sent, number of rows examined, number of temporary tables created on disk, number of temporary tables created on memory.

NOTE: Users, Hosts and Thread states information is not available in this mode.
