

SQL Compliance Manager Agent Properties window - Trace Options tab

The Trace Options tab of the SQL Compliance Manager Agent Properties window allows you to configure how the SQL Compliance Manager Agent manages the trace files that contain collected events for auditing.

If you are modifying properties for a SQL Compliance Manager Agent that is auditing a virtual SQL Server, SQL Compliance Manager applies your changes to the active node in the cluster hosting the virtual SQL Server. SQL Compliance Manager Agent properties are later replicated from the active node to the passive nodes.

The screenshot shows the 'SQL Compliance Manager Agent Properties' dialog box with the 'Trace Options' tab selected. The 'SQL Compliance Agent Trace Directory' section contains a text box for the 'Trace directory' set to 'C:\Program Files\IDERA\SQLCompliance\AgentTraceFiles'. The 'Trace Collection Options' section includes four input fields: 'Trace file rollover size (MB)' (5), 'Collection interval (min)' (2), 'Force collection interval (min)' (6), and 'Trace Start Timeout (sec)' (30). The 'Trace Tamper Detection Options' section has a 'Tamper detection interval (sec)' field set to 60. The 'Trace Directory Size Limit' section has two radio buttons: 'Unlimited' (unselected) and 'Limit trace directory to' (selected), with a value of 2 GB. The 'Unattended Auditing Time Limit' section also has two radio buttons: 'Unlimited' (unselected) and 'Limit unattended auditing to' (selected), with a value of 7 days. 'OK' and 'Cancel' buttons are at the bottom right.

Available fields

SQL Compliance Manager Agent Trace Directory

Provides the directory path under which the SQL Compliance Manager Agent stores trace files.

Trace Collection Options

Allows you to specify the following settings:

- The rollover size (MB) at which the SQL Compliance Manager Agent should send the current trace file to the Collection Server, and create a new trace file to continue collecting events
- Time interval (minutes) at which the SQL Compliance Manager Agent should send full trace files to the Collection Server
- Maximum time (minutes) that should elapse before the SQL Compliance Manager Agent sends existing trace files to the Collection Server (if no trace files are received during the normal collection interval)
- Maximum time (seconds) that should elapse before the SQL Compliance Manager Agent's attempt to stop or start a trace file times out and returns a failure. By default, the timeout value is 30 seconds. Ensure this setting does not exceed the specified collection interval.

Trace Tamper Detection Options

Allows you to specify the amount of time (seconds) that should pass before the SQL Compliance Manager Agent automatically restarts the SQL trace. The SQL Compliance Manager Agent detects whether the trace is stopped, modified, paused, or deleted by another application. After the specified tamper detection interval, the SQL Compliance Manager Agent restarts the trace and records the trace status to the application event log.

Trace Directory Size Limit

Allows you to specify the maximum size threshold (GB) for the directory where you are storing the trace files. The directory size is checked at each heartbeat. To effectively manage the directory size, ensure you allow ample room to accommodate your auditing needs and set the SQL Compliance Manager Agent heartbeat interval at a low frequency.

Unattended Auditing Time Limit

Allows you to specify the maximum time threshold (days) for allowing the SQL Compliance Manager Agent to run without receiving a heartbeat.
