Deploy SQL Compliance Manager in a clustered environment using Windows Server 2008 and later

The following instructions guide you through the installation of IDERA SQL Compliance Manager in a Windows Server 2008 and later based clustered environment. Be sure to have the following information available before creating the generic service:

- Name of the disk containing the folder
- SQL IP address
- SQL network name
- SQL Server service

Follow the steps described in the links below to complete the installation of SQL Compliance Manager in a Windows Server 2008 and later clustered environments

1. Install SQL Compliance Manager Collection server on cluster nodes
2. Register SQL Compliance Manager Collection server as a clustered resource

> ⚠ When auditing the **Collection Server** itself, follow steps 3 and 4 to complete the installation of SQL Compliance Manager

3. Install the IDERA Cluster Configuration Console
4. Deploy the SQLcompliance Agent to cluster nodes
