

SNMP Configuration window

The SNMP Configuration window allows you to specify the server address, port number, and community name of the network management console that you want to receive a IDERA SQL Compliance Manager alert notification as SNMP Trap messages.

Type the appropriate server address, port, and community name in the provided fields, and then click **OK**.

Click **Test** to verify that you entered the proper information for the network management console.

A screenshot of the 'SNMP Configuration' dialog box. The title bar reads 'SNMP Configuration'. The main text says: 'Specify the server, port and community name of the network management console you would like to have SQLcm alert messages (SNMP Trap messages) sent to.' Below this is a note with an information icon: 'Note: If you are using community names within your network, specify the community name you would like to use for this provider.' There are three input fields: 'Address:' (empty), 'Port:' (set to 162), and 'Community:' (set to public). At the bottom are three buttons: 'Test...', 'OK' (highlighted with a blue border), and 'Cancel'.
