

Configuration Check Report

The Configuration Check Report lists all the configurations selected on a Server or Database. Use these reports to reconcile the differences in regards to the configurations across different servers and databases.

The screenshot displays the IDERA SQL Compliance Manager interface. On the left is a navigation pane with a tree view. The 'Configuration' section is expanded, showing sub-items: Alert Rules, Configuration Check (highlighted), Privileged / Trusted Users, Regulation Guidelines, Regulatory Compliance Check, and Sensitive Columns / BAD. Below this are buttons for 'Explore Activity', 'Audit Reports' (highlighted), and 'Administration'. The main content area is divided into two sections. The top section, titled 'Configuration', contains five report cards: 'Alert Rules' (List alert rules.), 'Privileged / Trusted Users' (Shows the list of trusted/privileged users on servers/databases.), 'Regulatory Compliance Check' (Shows whether the servers/databases audit settings are inline with the applied regulatory g...), 'Configuration Check' (Show SQL Compliance Manager Configuration. - highlighted with a green border), 'Regulation Guidelines' (Shows Regulation Guideline details for all the guidelines applied to database on this instance.), and 'Sensitive Columns / BAD' (Shows Sensitive Columns and Before-After data audit settings.). The bottom section, titled 'Reporting Services', contains two cards: 'Deploy Reports' (Deploy reports and linked reports to Reporting Services 2005 or later.) and 'View Deployed Reports' (View deployed reports hosted by Reporting Services 2005 or later.).

Available actions

Server Instance

Allows you to select a registered instance on which you want to report. Select **ALL** to report on all instances.

Database

Allows you to select or type the name of one or more databases on which you want to report.

Audit Setting

Allows you to filter the report by specific audit setting. Select one audit setting from the drop down menu option.

Default Status

Allows you to compare what the current value setting is set to for that Server/Database compared to what the default setting is for that setting. Define the default status you want this report to filter by selecting between the following options; All, Same (Same value as the default) or Different (Different value as the default).

Run Report

Click this button to Run the report.

Default columns

Server Events

The Server Events column provides the name of the server event.

Default Status

The Default Status column allows you to compare the Individual Settings on the Server/Database with those that are set in your "Default" settings. If you have not set up "Default" Settings then it compares the settings against the IDERA Default Settings.
