

Change History (by User) Report

The Change History by User Report lists all security changes performed by specified users. Use this report to audit your SQL Server security settings and identify any misconduct.

The screenshot displays the IDERA SQL Compliance Manager interface. On the left, a navigation pane under 'Audit Reports' lists various reports, with 'Change History (by user)' highlighted. The main area, titled 'Alerts / History', contains a grid of report tiles. The 'Change History (by user)' tile is highlighted with a green border. Below the grid, there are sections for 'Reporting Services' and 'Administration'.

Alerts / History	
Agent History List all activity for SQL Compliance Manager Agent.	Alert Activity - Data Show SQL Compliance Manager data alert activity.
Alert Activity - Events Show SQL Compliance Manager event alert activity.	Alert Activity - Status Show SQL Compliance Manager status alert activity.
Application Activity List all activity by application.	Application Activity Statistics List a summary of application activity by activity type.
Audit Control Changes List all changes to SQL Compliance Manager audit settings.	Backup and DBCC Activity List all backup, restore and DBCC activity.
Change History (by object) List security changes for specified objects.	Change History (by user) List security changes performed by specified users.
Daily Audit Activity Statistics Provides summary audit statistics per day.	Database Schema Change History List all schema changes made to specified databases.
DML Activity (Before-After) Lists DML events for which before and after data is available.	Host Activity List all activity for specified hosts.
Integrity Check List all integrity check violations.	Login Creation History List all login creation activity.

Reporting Services

Deploy Reports Deploy reports and linked reports to Reporting Services 2005 or later.	View Deployed Reports View deployed reports hosted by Reporting Services 2005 or later.
---	---

Administration

A filter can include a list of wildcards, separated by commas, where a wildcard is a string, which may contain asterisks. The following parameters are specific to the selected report and enable you to filter the data to include in the report.

Available actions

Server Instance

Allows you to select a registered instance on which you want to report. Select **ALL** to report on all instances.

Databases

Allows you to select or type the name of one or more databases on which you want to report.

Login

Allows you to select the login from the drop down list of available logins. Select **ALL** to report on all logins.

Start Date

Allows you to select the start date for the range from which you want to report.

End Date

Allows you to select the end date for the range from which you want to report.

Start Time - Hour

Allows you to select the exact starting hour of the day for the range from which you want to report.

Start Time - Min

Allows you to select the exact starting minute of the day for the range from which you want to report.

Start Time - AM/PM

Select between AM or PM from the drop down list to configure the Start Time for Each Day range from which you want to report.

End Time - Hour

Allows you to select the exact ending hour of the day for the range from which you want to report.

End Time - Min

Allows you to select the exact ending minute of the day for the range from which you want to report.

End Time - AM/PM

Select between AM or PM from the drop down list to configure the End Time for Each Day range from which you want to report.

Schema

Allows you to type the name of the schema on which you want to report.

Target Object

Allows you to type the name of one or more target objects on which you want to report.

Application

Allows you to type the name of one or more applications on which you want to report.

Host

Allows you to type the name of one or more hosts on which you want to report.

Event

Allows you to type the name of one or more events on which you want to report.

Run Report

Click this button to Run the report.

Default columns

Database

The Database column displays the name of the database where the event was captured.

Event

The Event column displays a description of the event captured.

Schema

The Schema column displays the name of the event's schema.

Target Object

The Target Object column displays the name of the target object for the event captured.

Details

The Details column provides details of the captured event.

Login

The Login column displays the login name of the user who performed the event.

Host

The Host column displays the name of the host.

Application

The Application column displays the name of the application used to capture the event.

Time

The Time column displays the date and time when the event was captured.
