

Resolve performance issues

When an analysis is complete, SQL Doctor provides a priority-ranked list of recommendations that help you resolve the issues that are most affecting the performance of your SQL Server instance.

A [quick finding](#) provides a real-time analysis of your current SQL Server performance, allowing you to address issues right now as they happen.

You can get quick findings on a server-by-server basis. Use the left pane navigation tree to select the server you want to analyze now, and then review the data on the [Server Overview view](#).

 To see the latest analysis results across all registered servers, navigate to the [All Servers tab](#) on the Dashboard view.
