

# About viewing data from an Add-on AppTier

This section includes the following topics:

- [About viewing an Add-on AppTier in Precise StartPoint](#)
- [About viewing an Add-on AppTier in Insight](#)
- [About viewing an Add-on AppTier in Report Manager](#)
- [About viewing an Add-on AppTier in AdminPoint](#)

## About viewing an Add-on AppTier in Precise StartPoint

Within Precise, you can view the data flow diagram of AppTiers on StartPoint and in the Overview tab for Insight. The Add-on AppTier first appears in StartPoint as an unlinked front-end AppTier on the data flow diagram. In StartPoint, you can move the Add-on AppTier to the correct order and add links to the Precise environment. The Add-on AppTier name (for example: `_MyApp` or `_MyApp_2`) appears as a workspace on the StartPoint screen. See the *Precise Installation Guide* for details regarding StartPoint.

## About viewing an Add-on AppTier in Insight

The Add-on AppTier is displayed in the Overview tab for Insight, either in the Insight Cross-AppTiers workspace or in the workspace for the Add-on AppTier. Grouped entities (by default) are not displayed in the Insight user interface. See the *Precise Insight User's Guide* for more details.

## About viewing an Add-on AppTier in Report Manager

Report Manager compares the actual performance metrics to an appropriate baseline and identifies significant deviations. When you select a report, Report Manager displays its assigned reports in the Reports Table. Report Manager displays the following types of reports:

- Top-*n* reports to identify major business activities and resource hogs
- Trend reports to establish and analyze long-term system behavior
- Exception reports to identify deviations (from an established baseline) also from long-term system behavior

Report Manager reports are grouped into the following six different sets:

- Profile
- Exceptions
- Availability
- Load Balancing
- Capacity Planning
- Customized

See *Precise Report Manager User's Guide* for more information.

## About viewing an Add-on AppTier in AdminPoint

AdminPoint operations include a number of workspaces used to configure or update Add-on AppTier instances, after completing installation.
