

Configuring data collection intervals

When you register SQL Server instances, you can configure your data collection intervals. These settings are located on the first tab of the wizard that allows you to add SQL Server instances, for more information go to [Adding SQL Server instances](#).

The data collection settings that you can specify are the following:

- **Collection Interval** - how often SQL Enterprise Job Manager collects information for your instance, specified in minutes or days.
- **Keep data for** - how often data is groomed from the monitored SQL Instance, specified in days.

Edit Instance Properties

Instance: CH-SP2010

Instance Details and Ownership

Owner: Carla Location: Houston

Comments:

Data Collection Settings

Collection Interval: 6 Minute(s) Keep Data for: 30 Day(s)

Credentials

SQL Connection Credentials

Specify the account to be used to gather Instance Information.

Account Type: SQL Enterprise Job Manager service account

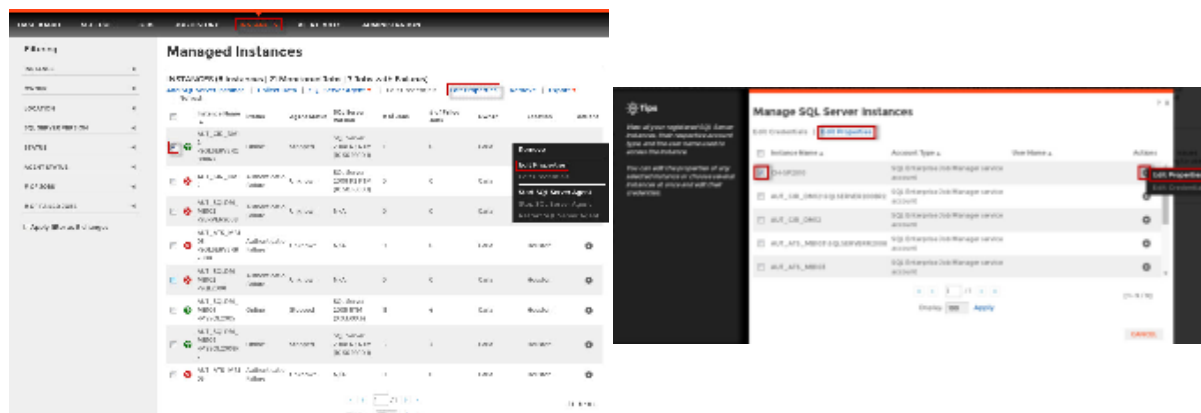

Pro Tip: Test the credentials to make sure SQL Enterprise Job Manager can gather data for instances

TEST CREDENTIALS SAVE CANCEL

You can edit this information after you have registered your instances. To modify these settings you can go to any of the following sections:

- **Instances** tab - click the instance for which you want to modify this information, and click **Edit Properties**. For more information on editing these properties, go to [Editing instance properties](#).
- **Administration** tab - click **Manage SQL Server Instances** under the Instances section, then select your instance, and click **Edit Properties** under the gear icon of the Actions column. This option is only available for users with Administrator role.

Below you can see the tabs and sections where you can find the **Edit Properties** option to configure your data collection settings. Click the image to view full size.

Read-only users cannot edit the properties of an instance, and therefore cannot configure the Data Collection Intervals.

SQL **Enterprise Job Manager** monitors and manages your SQL Server agent jobs. [Learn more](#) > >
