

Sending notifications

The IDERA Core Web Framework 3.0 allows you to send notifications over Email to all registered users in the IDERA Dashboard.

Click **Send notification** in the **Administration** tab to open a text field to enter the message you want to send.

The screenshot shows a web interface for sending notifications. At the top, it says "Send Notification to All Users" followed by a subtext "Add a warning message to notify all users about product upgrades." Below this is a modal dialog box with the title "Specify message to inform users". Inside the dialog is a large text input field and a "Send" button at the bottom left. To the right of the dialog, a portion of another button labeled "Manage Lic" is visible.

Click **Send** to send the notification message.

 The Notifications feature requires you to previously configure SMTP settings. Email notifications can only be sent to users with a registered Email address.
