Manage users in SQL Enterprise Job Manager

In order for users to access SQL Enterprise Job Manager, they must be registered. To add new users, edit their details (name, role, session time-out, email, etc.), or remove them, go to the **Administration** tab, and then click **Manage users** under the Users section.

SQL Enterprise Job Manager allows you to define three types of user roles:

- Administrator
- User
- Read-only

While Administrators can access all SQL Enterprise Job Manager features, Users and Read-only users have restrictions to some pages and actions within the application. Go to User Roles to see more information about each role.

To view more information on how to manage your users, go to Adding, Editing, and Removing users.
