

# Azure SQL Monitoring

SQL Diagnostic Manager fully supports Azure SQL Databases and Azure Managed Instances. It includes support for the following Azure SQL Deployment options:

- Azure SQL Single database
- Azure SQL Elastic Pools
- Azure SQL Managed Instance

Within the Azure coverage, SQL Diagnostic Manager has a complete and custom navigation pane for Azure SQL monitoring. The Azure SQL and RDS servers are identified by a cloud icon  which helps users to recognize them easily.

karltest...		qe-serve...	
No Alerts		No Alerts	
CPU	WAIT	CPU	0%
DISK	MEM	DISK	4.49MB/s
RESPONSE	SESSIONS	RESPONSE	131 ms SESSIONS 138

sqldevrd...		WINDEV23...	
No Alerts		Alerts: 5	
CPU	WAIT	CPU	0% WAIT 4s/s
DISK	MEM	DISK	19.26MB/s MEM 44%
RESPONSE	SESSIONS	RESPONSE	10 ms SESSIONS 20

The server navigation includes the following tabs when monitoring Azure SQL servers:

- Overview
- Sessions
- Queries
- Resources
- Databases
- Analyze
