

Configure preexisting policies

The **Preexisting** tab of the Import Wizard lists preexisting policies in the SQL Safe Repository.

 This page in the Import Policy will be skipped if there are currently no conflicting policies saved in the SQL Safe Repository.

Choose to overwrite or skip the import of these conflicting policies. You can do it one by one or select a couple of policies then click on the Overwrite Selected or Skip Selected options at the bottom of the wizard.

Use the  filter arrow to order the listed policies by name, type, and action.

The progress bar at the bottom shows the overwritten, skipped, and pending policies and the total number of policies.

Once you overwrite or skip the existing policies, click **NEXT** to [review the SQL Instances](#).
