

Changes to your Licensing

Apply changes to your licensing as follows:

- For *SQL Safe version 7.4 and later*, using the Multi-Instance (Central Repository) license key, you need to notify licensing@idera.com and provide the name of the new instance hosting the *SQL Safe Repository*. The *SQL Safe backup services* will continue running backups and caching statuses locally until the collection service is started on the new server.
- You do not need to apply changes to licensing for *older versions* of SQL Safe and Single-Instance (Keys generated per instance).
