Agent Deployment

To configure the service account SQL Safe uses to deploy Backup Agents, go to the **Agent Deployment** tab of the **Configure General Preferences** option from the **Administration** tab.

In this section, you can define whether you want to use the Local System built-in account or another account for the backup agent service account. If you select another account, you have to provide the respective username and password.

Additionally, in this section, you can configure SQL Safe to **Automatically upgrade Backup Agent Extended Stored Procedures**.

For any changes you perform on this tab, click **Save** to apply them.

SQL Safe is a high-performance backup and recovery solution for your SQL Servers. Learn more > >
