

# Review details for manual restore

The Summary tab of the restore wizard provides the summary of specified values and options you have selected in the Restore Wizard.

## What do I do next?

After you have reviewed the information on the Summary tab, click **Restore** to submit the restore job immediately, or click **Generate Script** to create a script you can use to run the job at a later time.

If you choose to run the restore job immediately, and want to verify a successful run, you can view its status in the Instance view. For more information, see [View backup/restore operation status](#).

## What actions can I perform on the Summary tab?

Action	Steps
To immediately restore databases	Click <b>Restore</b> , and then highlight the instance or database in the tree pane to see the status of the operation.
To create a CLI restore script	Click <b>Generate Script</b> , and then click <b>Command Line</b> . To save the script to a file, click the save icon or the copy script to clipboard icon. SQL Safe creates a restore script using the settings you specified for the selected databases. You can use this script to perform future restores of any system or user database you selected. Click <b>Close</b> to return to the Restore Wizard.
To create a T-SQL restore script	Click <b>Generate Script</b> , and then click <b>T-SQL</b> . To save the script to file, click the save to a file icon or the copy script to clipboard icon. SQL Safe creates a restore script using the settings you specified. You can use this script to perform future restores of any system or user database you selected. Click <b>Close</b> to return to the Restore Wizard. This script requires the SQL Safe XSP. For more information on installing the SQL Safe XSP, see <a href="#">Deploy the SQL Safe XSP</a> . For more information about how to use the SQL Safe XSP, see the sample scripts available from the Programs menu.

## How do I verify the status of my restore?

If you want to verify that your restore operation successfully ran, you can view its status using the Instance view. For more information, see [View backup/restore operation status](#).

SQL **Safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more](#) > >
