

Known issues

IDERA strives to ensure our products provide quality solutions for your SQL Server needs. The following known issues are described in this section. If you need further assistance with any issue, please contact [Support \(idera.force.com\)](https://idera.force.com).

Known issues in this version

User Interface

Users who have the Microsoft Windows **Appearance Text and Object Size** setting configured to 120% or 125% may notice some of the information is cut off on the right side. While this issue is scheduled as a fix for the next release, you can avoid the cut off text by changing the setting to 100%.

Login Copy

The Copy Logins function does not work when copying from SQL Server 2000 to SQL Server 2014. Note that if you attempt this procedure, the tool does not copy the login and does not display any error message.

Previous known issues

Linked Server Copy

Local computer accounts are not supported. If you create a linked server and map the security locally, the linked server is created, but you receive an error stating that it is not a valid login.

Database Mover

When copying a large database (10GB or greater) to another server, Database Mover may experience performance issues.

Server Configuration

Offers limited keyboard browsing. When browsing multiple servers, using the directional arrow keys will highlight a server, but not update the server details. Press **Enter** to refresh the screen and display the correct server information.
