Upgrade the Lite or Freeware Edition

The Management Console detects when a registered SQL Server instance is running SQLsafe Lite or SQLsafe Freeware Edition. You can upgrade the Backup Agent to the current version of SQLsafe enterprise edition using one of the following methods:

- Deploy the current version of the agent. For more information, see Install SQLsafe Backup Agent.
- Select the instance in the Servers tree, and then click Enable trial license on the Instance View. This upgrades the license to an enterprise edition trial license.
- Click Upgrade on the SQLsafe Agent Properties window. For more information, see Modify Backup Agent properties.

When you upgrade the Backup Agent, SQLsafe deploys the current version of the Backup Agent with a trial license enabled. The trial license allows you full access to the SQLsafe enterprise features for all SQL Server instances hosted on that computer. The trial license is a limited-time, limited-instance license that you will need to upgrade with a production license key.
