

Configure console options

You can specify the number of console options in the Console Options window that affect overall product behavior. Access the Console Options window by selecting  > **Console Options** from the SQL Diagnostic Manager Console toolbar.

The following tabs are available on the Console Options window:

Console Options

Change the most common properties of this application.

How often would you like to refresh data in the SQLDM Console?

Server View Refresh: 30 second(s)

Status and Alerts Refresh: 1 minute(s)

Would you like to hide the SQLDM Console when it is minimized?

☐ Hide when minimized

How should data be managed for real-time charts?

Keep real-time data for the last: 30 minutes

What theme do you prefer?

Theme: Light

Enable Baseline view

☒ Show baseline view

NOTE: Displayed data's overall timeframe can be adjusted with the History Range Control

OK Cancel

General

The [General tab](#) allows you to set how often the console refreshes data, hide the Console when minimized, select how SQL Diagnostic Manager manages chart data, choose what colors you want SQL Diagnostic Manager to use, and enable the Baseline view.

Alerts

The [Alerts tab](#) allows you to limit the number of historical alerts displayed in the Alerts view, which can improve the view's performance when there are many alerts.

Notifications

The [Notifications tab](#) allows you to configure how SQL Diagnostic Manager notifies you when alert data crosses a threshold.
