

Mirroring Summary

The Mirroring Summary report allows you to view the current mirroring sessions across all or selected tags or servers.

The data for this report comes from SQL Server system views for database mirroring. The SQL Diagnostic Manager alert thresholds are used to highlight existing issues as defined by your configured alert settings.

When to run this report

You should run the Mirroring Summary report to view a quick overview of the health of your mirrored databases.

How SQL Diagnostic Manager calculates metric values on this report

The values on the Mirroring Summary report correlate with the related SQL Server metric.
