

# Change Log Summary

The Change Log Summary report lets you view a list of all actions and configuration changes performed in your SQL Diagnostic Manager environment over a specified period of time and through various [filter options](#). The report contains detailed information, such as repository user, action type and time of action among other key data. For example, users are able to view all changes performed by a specific repository user.

## When to run this report

You should run the Change Log Summary report to audit overall activity in your SQL Diagnostic Manager environment. This report allows you to analyze key changes that might hinder your performance or represent a risk.

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
