

Mirroring Status alert

The Mirroring Status alert provides the status of the mirrored database based on the current databases status other than OK. By default, the values Synchronizing and Synchronized equal an OK state. A Suspended database triggers a Warning alert, and a Disconnected or Pending Failover database status triggers the Critical alert.

You can change the status for the mirrored databases in the **Mirroring** view of the **Databases** tab.

This alert is raised based on the diagnostic data collection interval specified in Server Properties. For more information, see [Set general server options](#).

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
