

# Availability Group Preferred Replica alert

The Availability Group Preferred Replica alert triggers when the preferred replica defined for a database changes to a different replica in a set period of time.

For more information on configuring alerts and setting thresholds, see [Configure alerts](#).

Create an alert response bundle with the Availability Group Preferred Replica alert and related alerts. For additional information, see [Create alert response bundles](#).

SQL [Diagnostic Manager](#) identifies and resolves SQL Server performance problems before they happen. [Learn more >>](#)
