# **Known Issues**

## **IDERA Dashboard**

## **Unsuccessful migration of SQL Workload Analysis**

After installation, the IDERA Dashboard is unable to successfully migrate SQL Workload Analysis to a different (remote) installation of the IDERA Dashboard. The suggested workaround is to perform a new installation in the target server.

## **Monitored Instances**

## Error adjusting the column width of the Monitored Instances list

The handlers that are used to adjust the width of the columns can go off-screen after performing an adjustment. The suggested workaround is to refresh (F5) the web browser to reset the columns width to their default settings.

## **License Management**

## Error updating license key information after the trial license expires

SQL Workload Analysis is unable to register a new license key after the trial license has expired. The suggested workaround is to register new license key information before the trial period expires.
