

## Configuring notifications for manual restore

The **Notifications** section of the Restore Wizard allows you to email a status notification to the appropriate database administrators about the restore operation. Email notifications let you and your staff remotely monitor the status of your restores.

Choose any of the following status you want to monitor:

- Restore fails
- Restore is cancelled by user
- Restore completes with warnings
- Restore succeeds

Type the email address of each recipient, separating them with semicolons.

✔ You must configure your mail server settings before SQL Safe can send email notifications. Click **Configure E-mail** to check your settings. For more information, see [configure e-mail settings](#) for status notifications.

When is the email sent?

SQL Safe sends an email to the specified recipients only when the selected restore status occurs.

Once you configure notifications, click **NEXT** to [review details](#).
