

Restores on Availability Groups

SQLsafe assembles all the necessary files for a restore operation even though the backups were taken from different Availability Group members. You can select which one of the Availability Group members (primary or replica) will be restored.

The **Backup Sets** section in the Restore wizard shows you backups taken from primary and secondary replicas for an Availability Group database.

SQL **safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more](#) > >
