

Choose to take snapshot now

The **Take Snapshot** section gives you the option to collect audit data at the end of the registration process. Choose this option when you want to immediately perform a security assessment on the newly registered instance. Note that you can also manually take a snapshot later by selecting **Take Snapshot** on the **Explore Permissions** view (Click [here](#) for more information about Snapshots). IDERA SQL Secure must collect data from the Registered Server to assess and audit security risks and access rights.

The screenshot shows a Windows-style dialog box titled "Register a SQL Server". Inside, there is a section titled "Take Snapshot" with a sub-header "Specify whether you want to collect audit data after registering this SQL Server." and a small icon of a server with a green plus sign. Below this, a question asks: "Do you want to collect audit data (take a snapshot) after registering this SQL Server?". A paragraph explains: "SQL Secure must collect data from the Registered Server to assess and audit security risks and access rights. This data collection can be scheduled or run manually." There is a checked checkbox followed by the text "Yes, collect data upon completion of the registration process." At the bottom, there are four buttons: "< Back", "Next >", "Cancel", and "Help".

If you want to take a snapshot as soon as finish registering your SQL Server instance, make sure to check the option **Yes, collect data upon completion of the registration process.**

Click **Next** to go [Registration Summary](#) section.
