

Specify policy properties

The **Name the Policy** section allows you to give your policy a name and a description. It is important to give your policies easily identifiable names and provide descriptions that help you select the appropriate policy during audits. The policy name and description can be changed later using the [Policy Properties](#) window.

The screenshot shows a window titled "SQL Secure Create Policy". Inside, there is a section titled "Name the Policy" with the instruction "Specify a name and description for this new policy." Below this, there are two input fields: "Name" and "Description". The "Name" field contains the text "CIS for SQL Server 2000". The "Description" field contains the text "Center for Internet Security - Benchmark for Microsoft SQL Server 2000, V 1.0, December, 2005". At the bottom of the window, there are four buttons: "< Back", "Next >", "Cancel", and "Help".

Click **Next** to go to the [Configure the Policy](#) Section.
