## **Change audit filters**

The **Filters** tab allows you to add a new filter, delete filters, and edit filter properties. Filters are the criteria used when collecting audit data for your snapshots.

Audited SQL Server Properties - CH-SP2010		
Specify which data collection filters should be used when taking a snapshot.		
General Credentials Audit Folders		
This window allows you to view and modif	y audit filters. You can add, delete, or edit filter properties.	
	😼 New Filter 😕 Delete Filter 📾 Properties	
Filter	Description	
💎 Default rule	Rule created when the server was registered	
Filter details		
<ul> <li>All Server objects, Database Security objects, Stored Procedures and Extended Stored Procedures</li> <li>All System and User Databases         <ul> <li>All System and User Tables</li> <li>All System and User Views</li> <li>All System and User Functions</li> <li>All System and User Functions</li> <li>All System and Ser Punctions</li> </ul> </li> </ul>		
	OK Cancel Help	

Note that All Extended Stored Procedures and All Full Text Catalogs are disabled when viewing properties for Azure SQL Database.

Option	Description
New Filter	This button opens the Add Filter Wizard, which allows you to add filters to your snapshot. For more information, see Add new filter.
Delete Filter	Click this button to delete the selected filter.
Properties	This button opens the <b>Filter Properties</b> dialog window, which allows you edit the selected filter settings. For more information, see Edit filter settings.

Once you have configured your snapshot collection settings, you can view your updated snapshots to ensure that they are set up the way you intended.
