

# Deploy the Backup Agent

When deployment is complete, you can back up and recover databases hosted on your virtual instances. You do not need to install any other SQL Safe components on your clustered servers to implement a disaster recovery strategy for those virtual instances. If you have a clustered environment hosting multiple instances, you must manually deploy the SQL Safe Backup Agent on each node.

SQL **Safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more > >](#)
