Add Amazon Account

AWS Account Name	AWS Access Key	AWS Secret Key	AWS Region Endpoint
------------------	----------------	----------------	---------------------

Before you begin

Make sure you perform these steps before adding an Amazon account on SIM.

1. Create an AWS account as trusted entity for read-only role on the main AWS account where SQL Inventory Manager discovery will be running.
2. Create a read-only role on the user's main AWS account (where SQL Inventory Manager discovery will be running)

Adding an Amazon account

For Amazon: "Specify the account to be used to connect to the Amazon EC2 or RDS instance. Amazon account information is needed to collect performance metrics. Please note that you may see charges from Amazon for Cloudwatch API requests. [Click here](#) for more information."

Click **Add Amazon Account** and enter the following information on the Amazon Account dialog.

AWS Account Name: Name for referencing the AWS account.

AWS Access Key: Access ID.

AWS Secret Key: Secret access key information.

AWS Region Endpoint: Select your Amazon region.

Amazon Account

To enable discovery of SQL Instances or Databases running on Amazon Elastic Compute Cloud (EC2) or Relational Database Service (RDS) requires two setups. There may be a charge for CloudWatch API requests by Amazon. See more information [here](#)

1. AWS Setup (get more information on how to do this [here](#))
 - a. Create an AWS account as trusted entity for read-only role on the main AWS account where SIM discovery will be running.
 - b. Create a read-only role on the user's main AWS account (where SIM discovery will be running)
2. SQL Inventory Manager Setup
 - a. Enter the AWS Account & Role info for the AWS Account that will be scanned
 - b. AWS User created with the read-only role (from step 1a)
