How to manage instance discovery

IDERA SQL Inventory Manager automatically discovers on-premises and cloud instances. You can trigger instance discovery manually using the options in the Discovery section of the Administration view. You can also configure IDERA SQL Inventory Manager to automatically monitor all newly-discovered instances and specify what credentials to use when attempting to connect to an instance.

This section consists of:

- Discovery Center options
- Auto Registration Options
- Discover Database Instances
- Manage Discovery Credentials
- Discovery Status
