

How to enable/disable security

SQL Inventory Manager supports authentication between internal services, this feature is disabled by default. If you have installed SQL Inventory Manager on the default path, you can enable/disable security, making the following changes on two locations:

1. Go to C:\Program Files\Idera\SQL\Inventory Manager\WebApplication\idera-main\conf, open **web.properties**, and then change `enable-authentication-for-rest=false` to `true`.
2. Go to C:\Program Files\Idera\SQL\Core, open **IderaCoreServices.exe** and change `EnableSecurity` to `true`.
