

# Welcome to SQL Defrag Manager

IDERA SQL Defrag Manager is a powerful solution that automates and optimizes your SQL Server database defragmentation. SQL Defrag Manager improves server performance and disk I/O by detecting fragmentation hot spots and defragmenting them using the optimal method and schedule.

This wiki helps you understand SQL Defrag Manager characteristics and provides step-by-step help on how to use all its features.

Need help using SQL Defrag Manager? See the following sections:

- [Installation and deployment](#)
- [Configure your deployment](#)
- [Automate defragmentation using policies](#)
- [Perform a manual defragmentation](#)
- [View activity and results](#)
