

Managed instances

By default when you go to the **Instances** tab, you access the **Managed** instances section first.

The list of managed instances displays all your environment's registered instances together with their status, response time, SQL Server version, edition, number and size of their databases.

You can click the headers of these columns to order your information; for example, click **# of DBs** to order all your instances according to the number of databases.

 **Instance status**

Next to the instance name, you can find the following icons that represent the instance status:

 Instance up

 Instance down

 Disabled instance

 Instance not available

 Authentication failure

 Slow

What actions can you perform on this view?

Edit bulk properties

You can use this section to select one or several instances and change:

- Owner
- Location
- Credentials

For example, if you have a new DBA, you can select all instances on this tab and click **Edit Owner** to change all instances owner at once.

You can also perform the following actions on several instances:

- Enable instances
- Disable instances
- Remove instances

Add SQL Server instance

On the top right section of this view, you can access the **Add SQL Server instance** wizard. For more information, refer to [Adding SQL Server instances](#).

Instance details

You can also access an instance details view by clicking its name. For more information about what information is available on the instance details view, refer to [Viewing instance details](#).

Edit instance properties

Click the pencil icon, next to the instance name, to access its properties. For more information go to [Editing instances properties](#).
