

New SQL Server Login wizard - SQL Compliance Manager Permissions tab

The SQL Compliance Manager Permissions tab allows you to specify which level of permissions this login should have within SQL Compliance Manager. A login can configure audit settings, change console security, view audit data, and run reports.

To allow a login to configure audit settings and console security, SQL CM adds the login to the Systems Administrator (sysadmin) fixed server role on the SQL Server instance that hosts the Repository databases.

Select the appropriate SQL Compliance Manager permission, and then click **Next**.

SQL **Compliance Manager** audits all activity on your server. [Learn more](#) > >
