SQL Server events you can audit

IDERA SQL Compliance Manager allows you to audit specific types of SQL Server event data, and distinguish between successful operations and failed operations. Whether an operation succeeds or fails is dependent upon whether the login permissions are correct.

Data types and corresponding events

SQL Compliance Manager captures the following types of event data.

Data Type	Events Audited	Description
Logins	Succes sful logins Failed logins Imperso nation	Audits login activity if an access check is performed and the event status is recorded (success or failure) at the server level
Administr ation	Backup s Restores DBCC Change server settings Alter trace Databas e operation	Audits common administrative tasks on the SQL Server instance
Security	Add login Add role Grant, Revoke, Deny Change role password Change login properti es Change owner	Audits all SQL security model activity
Databas e Definition (DDL)	Derived permissi on SQL stateme nt permissi on Databas e access	Audits create, drop, and alter operations performed on SQL Server objects, database objects, and schema object
DML	Object permissions	Audits common database operations, such as: • UPDATE • INSERT • DELETE

Select	SELECT	Audits all SELECT statements executed on database table
Privilege d User	All	Audits all privileged user activity at any level If the privileged user is also a trusted user, SQL Compliance Manager continues to audit this user because of its elevated privileges. For example, a service account that is a member of the sysadmin fixed SQL Server role will continue to be audited even though the account is designated as trusted.
User defined	All	Audits all custom events generated using the sp_trace_generateevent stored procedure

Data levels

You can capture different event data at one or more of the following levels:

- SQL Server instance
- Database
- Database object, such as a table

This flexibility allows you to achieve precise and granular compliance. For example, you can configure different audit settings for multiple databases hosted on a single registered SQL Server instance.

SQL Compliance Manager audits all activity on your server. Learn more > >
