

Creating Profiling Reports

After profiling a data source, you can create an HTML or PDF Report of the profiling session. You can choose the details to include in the report.

1. At the top right corner of the Profiling tab, click the **Export Report** button.

The **Export a Profile Report** dialog appears.

The 'Export a Profile Report' dialog box is shown. It has a title bar with the text 'Export a Profile Report'. Below the title bar, there is a section titled 'Export a Profile Report' with a subtitle 'Configure and export a profiling report in various formats.' Below this, there are several input fields and options:

- Report Title:** A text box containing 'Data Source Profile Report'.
- Report Description:** A text box.
- Profile Report Options:** A section with a dropdown menu set to 'SQL'. Below it, there are two checked options: 'SQL' and 'Report only the top 25 rows'. There is also an option 'Include detail information for top 25 rows' which is unchecked.
- General Report Options:** A section with three sub-sections: 'Format' (radio buttons for PDF and HTML, with PDF selected), 'Layout' (radio buttons for PORTRAIT and LANDSCAPE, with PORTRAIT selected), and 'Paper Size' (radio buttons for Letter (8.5 x 11, 216 x 279), Legal (8.5 x 14, 216 x 356), and A4 (8.3 x 11.7, 210 x 297), with Letter selected).
- Use default export location:** A checked checkbox.
- Export location:** A text box containing 'C:\Users\npollard\AppData\Roaming\Idera\dboptimizer\workspace' and a 'Browse...' button.

At the bottom of the dialog, there are three buttons: a help button (question mark icon), an 'Export' button, and a 'Cancel' button.

2. Enter a **Report Title** and **Description**.
3. In the **Profile Report Options** area, click the triangles to expand the options.

4. Select your options, enter the location for the report, and then click **Export**.
A report in PDF format will resemble the following:
