Create a New Tuning Job

You can create a new tuning job via the File > New > Tuning Job command, or by importing statements directly from profiling. The New Tuning Job icon is also available on the Toolbar.

To create a new tuning job via the Menu or Icon command

Select File > New > Tuning Job, or click the New Tuning Job icon on the Toolbar. Tuning opens.

You can now proceed to set up the parameters of the new job.

To create a new tuning job from profiling

After you have run a profiling session, in profiling's **Profiling Details** tab, select one or more statements, right-click, and select Tune from the context menu. Tuning opens, pre-populated with parameters based on the statements you selected.

To open an existing tuning job

Navigate to the SQL Project tab and double-click the name of the existing tuning job.

To name a job, save it

Ensure you specify a meaningful name that identifies the job in other views and dialogs. You can save the job by selecting **File > Save or File > Save All** from the Menu bar. Once a job is saved, it is added to the SQL Project view.
