

View Statement or Case Code in SQL Viewer

The Tuning job's **Overview** tab let you open a statement in an SQL Viewer if you want to perform either of the following tasks:

- View the entire SQL statement.
- Set bind variables. If the Tuning Status Indicator indicates a statement or case has invalid bind variables, you must set those variables before executing the statement or case.

To view or set bind variables in a statement or case

1. Right-click a statement or case and select **Edit**.
2. Use the **Data Type** and **Value** (or **NULL**) controls to specify the type and value for each bind variable.
After setting bind variables, you can execute a case.

Setting the bind variables in a parent statement sets the bind variables in all generated cases for that statement.
