

JDBC Connection Parameters

Connection Parameter	Description
Connect String	<p>Used by the JDBC Driver to connect with a database. Often contains host and port numbers, as well as the name of the database to which it connects.</p> <p>For example:</p> <pre>jdbc:postgresql://host:port/database jdbc:derby://host:port/database</pre>
Data Source Name	The name of the data source to which you want SQL Query Tuner to connect.
