Last Full-Text Catalog Update (Hours) alert

The Last Full-Text Catalog Update (Hours) alert provides the time, in hours, since the last Full-Text Catalog update was performed and beyond which the statistics data is considered outdated.

Since full-text indexes are contained in full-text catalogs, when you create new content or change existing content in a catalog, you must regenerate the full text index. This, along with inefficient indexes can impact your monitored SQL Server performance.

SQLdm allows users to optimize full-text catalogs, for details see Monitor Your Full-Text Searches.

Note that this alert is raised based on the diagnostic data collection interval specified in Server Properties.

⚠️ This alert is for visual indicators in the **Desktop Client only**. SQLdm does not send notification when this alert is triggered.

SQL Diagnostic Manager identifies and resolves SQL Server performance problems before they happen. Learn more > >
