Compare assessment summaries

Use the **Compare Summaries** tab on the **Assessment Comparison** window to identify any differences in the security status of the two selected assessments. IDERA SQL Secure highlights each difference in yellow in the **Assessment Status** of each assessment.

The Report Card Comparison Summary shows where findings are equal (=) or not equal ().

From this tab, you can:

- · Identify changes in risk level
- Compare security check findings
- · Monitor whether security checks are enabled or disabled
- Monitor whether SQL Server instances are added or removed
- · Review security status for all instances audited by each assessment

For a detailed comparison of each security check, see the Compare Security Checks tab. For more information, see Compare Assessments.
