

# Connect to Reporting Services

The **Connect to Reporting Services** section of the **Deploy Reports to Reporting Services** wizard allows you to specify the Report Server to which you want to deploy the IDERA SQL Secure Reports. The Deploy Reports wizard automatically applies connection settings based on a default Microsoft Reporting Services installation. You can use the default connection settings, or specify custom connection settings.

To specify connection settings, click **Show advanced connection options**, and then enter the appropriate settings.

Click **Next** to go to the next section where you can [specify the repository as report data source](#).

To successfully deploy reports, you must have Content Manager rights on the Report Server. For more information, see the Reporting Services Books Online.
