Types of job steps

When you define steps for a job, you have to determine the type of step. SQL Enterprise Job Manager handles the following types of steps:

- Executable programs and operating systems commands.
- Transact-SQL statements, including stored procedures and extended stored procedures.
- Powershell scripts.
- Replication tasks:
  - Replication Distributor
  - Replication Merge
  - Replication Queue Reader
  - Replication Snapshot
  - Replication Transaction-Log Reader.
