Managing your SQL Enterprise Job Manager licenses

To access all SQL Enterprise Job Manager features you need a license key. This license determines the number of SQL Server instances that you can monitor.

In the Manage License section, you can view your license status, add, or buy a new license key. To access this option, go to the **Administration** tab and click **Manage License** on the **Licensing** section.

SQL Enterprise Job Manager opens a new window that displays information relevant to your current licenses such as type of license, status, expiration date, total licensed servers, current monitored servers in your environment, license key, and SQL Enterprise Job Manager repository.

If you want to add a new license key, type the key under the **New License** section and click **Apply**.

If you need to buy another license, go to Click here to buy more SQL Enterprise Job Manager licenses.

> ⊘ Only users with the Administrator roles can access the **Administration** tab, and therefore, **Manage License** is only available to this user role.
