Welcome to SQL Defrag Manager

IDERA SQL Defrag Manager is a powerful solution that automates and optimizes your SQL Server database defragmentation. SQL Defrag Manager improves server performance and disk I/O by detecting fragmentation hot spots and defragmenting them using the optimal method and schedule.

This wiki helps you understand SQL Defrag Manager characteristics and provides step-by-step help on how to use all its features.

Need help using SQL Defrag Manager? See the following sections:

- Installation and deployment
- Configure your deployment
- Automate defragmentation using policies
- Perform a manual defragmentation
- View activity and results
