

Actions on currently running queries

Query Details and Kill

SQL DM for MySQL enables you to do the following actions on your threads:

- `VIEW` the current query for the selected process.
- `EXPLAIN` the query currently executed by the selected process (`EXPLAIN` works for DML queries only) and this shows the optimized query returned by `EXPLAIN EXTENDED` if MySQL server supports.
- `KILL` a process.

Privileges required for optimal use of this feature

You should notice that to retrieve information about processes of other users, you need the `PROCESS` (or `SUPER`) privilege. However, to kill a process you need the `SUPER` privilege. SQL DM for MySQL notifies you of the limitations of your permission level (that is, if you do not have full privileges to use all the options provided).
