

Get started

SQL Diagnostic Manager for MySQL is a monitor and advisor application for MySQL database administrations. It provides you with tools to manage more database servers, to tune your current database infrastructure, and to aid you in finding and fixing problems with your database applications before they develop into more serious issues or costly outages.

With SQL Diagnostic Manager for MySQL, you can proactively monitor enterprise database environments and obtain expert advice so that even administrators new to MySQL can tighten security, optimize performance and reduce downtime of their MySQL powered systems.
