

# How does SQLdm help me?

Whether you need immediate diagnostic information or want to gather data for long-term capacity planning, you can use SQLdm to help:

- Increase SQL Server availability
- Provide a comprehensive view of current performance
- Provide continuous, unattended monitoring
- Store data in the centralized SQLdm Repository database
- Improve the productivity of both skilled and novice database administrators

With clear, easy-to-understand charts and reports, you can track standard SQL Server performance metrics, trend historical performance data over time, and proactively identify potential performance problems.

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more > >](#)
